PROFESSIONAL SUMMARY

BSc Honours Computer Science Student at the University of Pretoria with hands-on experience building AI-driven systems from full-stack platforms to NLP research. Developed Future Feed, a customisable social networking platform combining Boolean-logic feed filters with LLM-powered bots, real-time WebSocket updates and built-in content moderation. Currently searching on a comparative evaluation of traditional vs transformer-based sentiment analysis models for South African university reviews. Interest in a full-time or internship role in software development, NLP or data analytics.

SKILLS

Languages: Java, Python, C++, JavaScript

Web Technologies: HTML, CSS, Tailwind CSS

Frameworks: React, Vue.js, Node.js, Express.js, Vite, PyTorch, Scikit-learn, Jest

Databases: SQLite, PostgreSQL, MySQL, MongoDB

Dev Tools: Git, GitHub, Docker, Postman

Other: Figma, Canva, Power BI

EXPERIENCE

Data Science (Vocational Work), Telkom SOC, Pretoria

Jan 2024 – Feb 2024

- Cleaned, analysed, and visualized large datasets.
- Built dashboards and automated reports using Power BI and Excel.
- Identified trends and learned insights on how to make better, data driven decisions based on analysis.

PROJECTS

Future Feed

React | Tailwind CSS | JavaScript

- Built a full-stack social networking platform with Boolean-logic feed filters, Giving users granular control over content ranking instead of a black-box algorithm.
- Integrated LLM-powered bots for content generation and curation, with built-in moderation, NLP-based topic tagging, and clear bot-post labelling for responsible AI use.
- Implemented real-time feed updates via WebSocket alongside core social features (posts, likes, comments, resharing, follow/unfollow, search, analytics dashboards).

ReviewFlow (Submission Review System)

Java | Maven | H2 (JDBC)

- Refactored a monolithic evaluation engine into a Decision Table class with type-safe Outcome enumeration, replacing scattered if/else logic and duplicate notification methods.
- Decoupled business logic from persistence by replacing a live H2/JDBC database layer with An in-memory data layer, adding submission-ID traceability across the pipeline.
- Modelled a reviewer-assignment and consensus-decision workflow applicable to real systems like academic conference submissions, journal peer review or hackathon judging where conflict of interest filtering and workload balancing are common requirements

EDUCATION

Bachelor of Science in Computer Science

2022 – 2025

University of Pretoria

Bachelor of Science Honours in Computer Science (Current)

2026 – 2026

University of Pretoria

ACHIEVEMENTS

- Advanced Software Engineering Concepts – Distinction pass at honours level (75%)
- Natural Language Processing – Distinction pass at honours level (86%)
